Education:

University of Georgia — Athens, GA

BS. in Computer Science/MS. in AI — Graduating 07/2027

GPA: 3.51

Skills:

- Languages: Java, C, Python, C++, React, Next JS, Tailwind CSS, SQL, Javascript
- Tools: Visual Studio, Eclipse, PyCharm, GitHub, Microsoft Office, Matlab, Fusion360, Linux, AWS S3, Pandas, NumPy
- AI Models Utilized: YOLO5, Resnet, Transformer Models, CNN, Faster-R-CNN

Relevant Coursework:

- Systems Programming, Software Engineering, Data Structures, Linear Algebra, Computer Architecture, Biomedical Image Analysis, Data Science, Theory of Computing, Discreet Mathematics, Computational Science

Certifications:

- AI For Everyone: Fundamental AI Concepts including machine learning and deep learning. — Certified 06/2024
- Introduction to Generative AI Certification: Introduction/application of LLMs. — Certified 06/2024
- Introduction to RAG Certification: Introduction and application of RAG. — Certified 08/2024

Professional Experience:

Senior Engineer, *CREATE Labs UGA* — 08/2024 - Present

- Leading software-oriented Product Development teams; 4-6 students each; cross-functional teams.
- Utilized Arduino, ESP32 microcontrollers; integrated embedded systems and C++ programming, Node.js for frontend.
- Mobile app development through Flutter/Dart, using Oauth2/Firebase for security, Firestore for Cloud storage.

Campus and Community Involvement:

Server Chair + Backend Team Lead, *Kappa Theta Phi* — 08/2025 - Present

- Assemble and maintain custom First ever custom UGA server KRONOS, using Proxmox for software organization
- Lead backend team in development of CourseHawk, a software engineering initiative to improve academic performance.
- Facilitating cooperative environment through team organization, sprite structures and an Agile development process.

Tech Team Developer, *UGAHacks* — 07/2025 - Present

- Develop/Maintain UGAHacks 11 website and Hacks 11 registration using React.js and Next.js; Tailwind CSS for styling.
- Internal collaboration within Tech Team and external collaboration with marketing and logistics teams for Figmas.
- Designing and delivering technical crash courses to prepare hackathon participants, covering hardware and software topics tailored to build foundational skills in areas such as version control, electronics prototyping, and front-end development.

Software Engineer, *AI@UGA* — 04/2025 - 12/2025

- Developing a RAG-based student assistant platform leveraging Langchain to program LLMs and implement NLP.
- Collaborating with a cross-function development team to build a modular backend using FastAPI, with Supabase as a PostgreSQL-backed authentication and data storage solution; using SwaggerUI for API testing and visualization.
- Facilitating integration between frontend UI and backend components via RESTful APIs and JSON-based data contracts.

Project Experience:

AI Mental Health Chatbot – Ghostwriter — 10/2025

- Claude Builder Club Entry: A privacy-first mental health application to provide 24/7 AI-powered emotional support
- Integrated Anthropic Claude Sonnet 4.5 API with custom prompt-engineering optimized through 50+ iterations.
- Implemented custom React frontend and developed NLP crisis detection algorithm to identify self-harm indicators.

UGAHacks X First Prize Team Hardware Hack – 'Banjovi' — 04/2025

- Design, implementation, deployment of retro-style musical instrument; building, printing and programming from scratch.
- Integrated analog joysticks and buttons with Mozzi-based C++ audio encoding, documenting all progress and challenges.
- Awarded First Prize in Hardware Category for innovative design, usability, technical prowess and competition disruption.

AI-Powered Image Analysis — 03/2025

- Developed an image edge-detection pipeline using classical computer vision and deep learning.
- Used BSDS500 dataset for edge detection benchmarking and applied standard preprocessing and image segmentation.
- Implemented Canny Edge Detector and Sobel Filter through OpenCV for comparison through different filters.
- Fine-tuned U-net architecture in PyTorch and experimented with HED models for multi-scale edge detections.

Leadership:

- Founder of the LLM Innovation Group — 12/2025 – Present
